

SPECIFIC LOCATION OF YOUR NEW ELECTRIC SERVICE

Directions

Use the space below to diagram the location where you are requesting service. Indicate all buildings, roads, driveways, other utility service (existing electric lines, telephone, gas, etc.), sewer systems, boundary markers and any other obstacles located on your property. Give approximate distances of the dimensions of your property and all other distances involved.

Indicate where you would like your meter to be located. If your property has not been developed yet, the location where you would like your service entrance, should be marked with a stake and flag.

Using the information that you supply on this form, we will be able to determine what needs to be done to supply electric service and better figure an estimate of the cost for construction (if any).

PLEASE NOTE: Do not use the space below to give directions on how to reach your property. Rather, devote your diagram exclusively to your property and the immediate surrounding area.
